Home, Sweet Home

In the history of our country, the words "Home, Sweet Home" have never meant quite what they mean today. The aftermath of a world-wide struggle finds us without many, many things that we formerly took for granted. The situation is universal. No one has escaped it.

A few moments of reflection brings to one and all a sincere appreciation of what a piece of land and a shelter thereon represents to those fortunate enough to have one. Is it not logical, therefore, that under such conditions we should bend every effort to make the homes we have more livable and more abundantly fruitful of happiness for ourselves and for others?

Purchased diversion is a common form of individual selfishness. Those who carry it too far miss much in life. The greater fun and richer life that comes from creating our own relaxation is the reason why so many of us wisely give in to our hobbies, and often become creative producers.

It is not our purpose to decry the many forms of relaxation that call for a direct outlay and that are merely a memory a few hours later. Within limits, such outlays are beyond criticism, but having spoken of hobbies as being worthwhile, we do want to emphasize gardening "as the greatest hobby of them all."

You can buy vegetables and fruits at a market; you can buy flowers from a florist; and you can sometimes, but by no means always, buy health from a doctor, but in a garden where you are outdoors in the fresh air and the sunshine, you can preserve your health which is, after all, your most precious possession, and you can grow better vegetables, fruits and flowers than you can buy. There is another point—almost regardless of how much you spend on your garden, you can still save money! How? Because you don't spend it foolishly elsewhere!

Think it over! Also remember, there is no place like home—your piece of land and the shelter thereon.

SOMETHING NOT TO BE MISSED!

For many years "Boston Park" has been our standard recommendation to those who wish the best in lawn grass seed mixtures and for years its reputation as a quality lawn builder has grown. The experience of five generations of New England seedsmen has been used in the blending of this superb mixture of choice grasses, each of which has survived the test of the most rigorous cold as well as the opposite extremes of Summer weather. "Boston Park" is designed to provide the kind of lawn that everybody wants; one that starts green in the Spring and stays green throughout the season. Guaranteed to contain no crabgrass seed.

Due to popular demand no Clover is included in this mixture.

Use one pound to 250 square feet

A companion to **Breck's Boston Park Lawn Seed Mixture** and designed to blend perfectly with it. It is adapted to those places which have little or no direct sunshine. The component grasses are all of the highest quality. They have been chosen for their ability to withstand climatic extremes and because they will thrive in shady places where other grasses will not grow. Guaranteed to contain no crabgrass seed.

This mixture of grasses is planned particularly to form a sod which will stand very hard usage and still prove permanent. It will make a strong, rapid growth and the roots will strike deep into the soil, thus providing a thick, green turf which will not suffer from rapid drying out in very dry weather. An ideal mixture for playgrounds too; no Clover is included.

Banks and terraces are often a part of the lawn surface around a house. For such sloping areas it is necessary to use a Lawn Seed Mixture that contains grasses which establish themselves quickly and with roots systems that will not only support the grass plants, but also insure the sloping ground against erosion. The grasses used in Bank and Terrace Mixture will meet all conditions of drought and torrential rain.

The finest mixture of quality grasses for the home lawn that money can buy. It is made up of fast growing varieties which will start quickly and produce a fine close lawn within a few weeks, together with such permanent grasses as Colonial Bent and Chewing's Fescue which gradually replace the former to form a turf which will last for years, if given reasonable care. This permanent lawn will have a fine even texture of the richest green color; it will stand the severest cold of Winter and withstand the heat of Summer. Breck's "Velturf" is guaranteed to contain no crabgrass seed and because of the luxuriant close textured turf when established crabgrass has little chance for survival. We recommend this grand grass seed mixture highly.

VEGETABLE PLANTING CHART

In order to simplify the planning of your garden and so that you may have your seed requirements on hand in good season, we have prepared the following vegetable planting table. The dates given must by necessity be approximate for weather conditions vary so from year to year that hard and fast rules in regard to times of planting are impossible. However, unless the season is unusually late they may be followed with reasonable assurance of safety. Our estimates on the number of plants or the length of row that an ounce or a pound of seed will produce, are moderate. In many cases many more plants will result and if great care is taken in handling, the seed will sow a row longer than that specified. In spite of variations such as are mentioned above we believe that you will find this chart helpful.

BRECK'S VEGETABLE SEEDS

Underlined items are those which we particularly recommend

Asparagus-Mary Washington

ASPARAGUS

Asparagus is a hardy perennial plant which will bear a satisfactory crop over a 20-year period if the bed is properly established and cared for. We recommend the purchase of ASPARAGUS ROOTS (offered below) rather than seeds for the fussy work of starting, transplanting and selection are thus eliminated and above all, a crop may be harvested at least 2 years earlier.

If seed is used sow it thinly in drills, in the early Spring and cover to a depth of only ½ inch. The resulting plants should be thinned out to stand at least 6 inches apart and when a year old transplant them to carefully prepared and heavily enriched beds.

1 ounce of seed will sow about 60 feet of drill

1 ounce of seed will sow about 60 feet of artifered from the following of the foll

BEANS

Time to Plant—Seed of BUSH SNAP BEANS may be sown about May I with later plantings until about August I; DWARF SHELL BEANS from May I to about June 20 and POLE SNAP BEANS from May I to July 5. LIMA BEANS should not be planted before May I5 with later plantings of the Bush varieties until about June 20 and until about June 10 with the Pole varieties.

Planting—Plant BUSH BEANS in rows about 2½ feet apart and cover the seed to a depth of about ½ inch. POLE BEANS should be planted in hills with a stout pole, 6 feet or more tall in the center of each hill. These hills should be arranged in rows and spaced about 2 feet apart in the row. Leave about 4 feet between the rows to admit plenty of air and light. Two or three plants should be allowed to each pole. 1 pound of BUSH BEANS will sow a row of about 50 feet; 1 lb. of POLE BEANS (except Limas)
will plant about 200 hills; and 1 lb. of LIMAS, about 75 hills

Pkt. 20c., ½ lb. 30c., lb. 50c., 5 lbs. \$2.35

Time to Plant—Sow quite early in the Spring (about April 20) and at intervals, from then until about July 25.

Soil Preparation-A light, rich soil is best. Do not use fresh manure for it will cause the roots to become scabby. Old, well rotted manure well mixed with the soil is excellent; also a standard vegetable fertilizer with a high potash content.

Planting—Sow the seed thinly in rows and later thin out so that the plants will stand about 2 inches apart. Allow about $1\frac{1}{2}$ feet of space between rows.

1 ounce of seed should sow a 50-foot row

5272 Crosby's Egyptian, Breck's Arlington Strain. 50 This strain is unequaled for its fine shape, color and quality. The roots are uniform in appearance with small tops and slender tap-roots. For table use, and therefore for growing in the home garden, we recommend it unreservedly.

Pkt. 15c., ½ oz. 30c., oz. 50c., ¼ lb. \$1.50, lb. \$4.50

5274 Early Wonder. 49 to 52 days. Has a small top and therefore is an excellent Beet for bunching. Roots somewhat top-shaped of uniform color and good quality.

Pkt. 10c., ½ oz. 20c., oz. 35c., ¼ lb. \$1.00

5279 Breck's Beats All. 60 days. Generally considered an excellent all-round early or main crop Beet for the home garden and general planting. The tops are small, upright in growth; leaves dark green, shaded with red; color uniformly deep red; flesh, a vermilion-red zoned with a slightly lighter shade of same color. Pkt. 10c., ½ oz. 25c., oz. 40c., ¼ lb. \$1.15

5283 Harvard. 55 to 60 days. Since its introduction a few years ago this really superb quality Beet has gained tremendous popularity. Luscious when grown rapidly and picked small.

Pkt. 15c., ½ oz. 30c., oz. 50c., ¼ lb. \$1.50

5297 Detroit Dark Red. 58 days. Roots are very smooth, globular, and of a very dark red color. Tops small and reddish green. An excellent main-crop and canning Beet.

Pkt. 10c., ½ oz. 25c., oz. 40c., ½ lb. \$1.15

5306 Winter Keeper. 75 days. tapering, deep red Beet of exceptional qualities. Used young or old, small or large, they are always sweet and tender. The quality persists through a long storage period. Pkt. 15c., ½ oz. 30c., oz. 50c.

5308 Beets for Greens. This variety is offered especially for the production of vitamin-rich greens rather than roots. These Beet tops are considered to be among the most tasty of

Summer greens.
Pkt. 10c., oz. 25c., ¼ lb. 75c.

5247 Breck's Mammoth Long Red.

110 days. For stock and poultry This fine strain is smooth skinned and finely-grained. Color deep red. Roots

very large and oval in form. Oz. 25c., 1₄ lb. 75c..

5354 Copenhagen Market Cabbage

CABBAGE

Time to Plant—Early Cabbage may be started indoors in a coldframe as early as March 15 or in the garden from April 20 until about July 10. Late varieties should be sown during May.

Soil-The soil for Cabbage should be deep, rich and well drained. Wet, sour soils will only cause failure Seed Sowing—Sow in flats or in sheltered seed beds of finely pulverized loam. Broadcast the seed thinly over the surface and cover lightly (no more than ¼ inch) with finely sifted soil.

Culture—When the plants are large enough to handle thin out or transplant so that they will be far enough apart to develop properly. Early Cabbage may be transferred to their permanent positions in the garden from late April on. Late Cabbage for Winter use should be set out not later than July 15. In planting out set the plants 18 inches apart (late varieties 24 inches) in rows and allow 2½ feet between rows.

1 ounce of seed should produce about 2000 plants

CHINESE CABBAGE

Chinese Cabbage thrives best in cool weather and is usually grown as a Fall crop. However, if an early Spring crop is desired sow the seed indoors about April 1 and transplant to the garden in late April. Otherwise sow in the open ground during early July in rows, spacing the rows about 2½ feet apart. Cover the seed with not more than ¼ inch of soil. When the plants are 2 or 3 inches tall, thin out or transplant to about 18 inches apart.

1 ounce of seed should produce about 5000 plants

5421 Chihili. 75 days. A tall and slender variety which resembles Cos Lettuce. The midribs are large and the heads cylindrical. 14 to 18 inches in height. Pkt. 10c., ½ oz. 40c., oz. 75c., ½ lb. \$2.25

CHERVIL

An aromatic sweet herb that resembles Parsley. The young leaves are used in soups and salads. Easily grown in shallow drills. Sow at intervals of four weeks in drills ½ inch deep, I foot apart. This will provide for successive crops which take about 45 to 60 days to mature. The seed is slow to germinate.

5681 Chervil, Curled.

Pkt. 10c., ½ oz. 35c., oz. 60c.

CHICORY

Sow in deep, well prepared soil during May or June in rows 2 feet apart and cover not over 1/4 inch. Thin plants to 6 inches apart.

1 ounce of seed will sow 100-foot row

5446 Witloof (French Endive). For salads and greens. In the Fall, store the roots in sand in a cool cellar for forcing during the Winter, or leave them outdoors until Spring when the new 6-inch shoots may be used for greens.

Pkt. 10c., ½ oz. 40c., oz. 70c., ¼ lb. \$2.00

5457 Large-rooted. Used as a substitute for coffee. The roots are lifted in the Fall, thoroughly roasted; then ground.

Pkt. 10c., ½ oz. 40c., oz. 70c., ¼ lb. \$2.00

CHIVES

Chive seeds may be sown outdoors from about April 20 until early July. Sow thinly in rows, spaced about 18 inches apart. The resulting plants should be thinned out or transplanted to stand about 1 foot apart. Chives are perfectly hardy and may remain in the garden throughout the Winter or the plants may be lifted and planted in pots or boxes for growing indoors during the Winter for a constant supply of this most desirable flavoring plant.

1 ounce of seed will sow a 200-foot row

Cauliflower

Time to Plant—Sow the seed indoors or in a coldframe about March 15 or in the garden from about May 1 to June 15.

Soil—A deep, rich, well drained soil is the ideal type for Cauliflower. Wet, sour soils are unsatisfactory.

Seed Sowing—Sow in flats or sheltered seed beds of finely pulverized loam. Broadcast the seed thinly over the surface and cover lightly (no more than ½ inch) with finely sifted soil.

Culture—When the plants are large enough to handle thin out or transplant far enough apart so that they may develop properly. The plants may be transferred to positions in the garden from about May 1 until early July. Set them in rows with about 18 inches between plants and 2½ feet between rows. Be sure that Cauliflower is well watered in periods of drought. Examine the plants frequently and as soon as heads develop to 3 or 4 inches in diameter either tie or break the leaves over them to exclude all possible light.

1 ounce of seed should produce about 2000 plants

1 ounce of seed should produce about 2000 plants

5502 Breck's White Bouquet. 55 days. We believe this to be the finest Cauliflower in existence. The plants are short-stemmed with small leaves, producing medium large close-grained snowy-white heads of superb lity. Admirable for New England growing.

CELERY

For the early crop seed should be sown in a greenhouse during March, in flats. The late or main crop should be sown in a coldframe or even in a sheltered seed bed out of doors, in late April or during May.

Broadcast the seed thinly over the surface of the soil and cover very lightly (no more than 1/16 inch) with finely sifted soil. As soon as the plants are large enough to handle thin out so that they are an inch or two apart. The early plants should be transplanted to permanent positions in the garden in May and the late crop in late June or July. Set the plants about 8 inches apart, in rows and allow at least $2\frac{1}{2}$ feet between rows. Celery should have a deep, rich, fertile soil which is well-drained. It should have an abundance of moisture.

Cropping dates of Celery are figured from the time the small plants are set out in the garden or field

CUCUMBERS

Time to Plant—Do not sow outdoors until the weather has become settled and warm, during June.

Soil Preparation—Cucumbers prefer a rich, porous soil and we suggest digging in a generous shovelful of well rotted manure when preparing each hill.

Planting—Sow in hills (7 or 8 seeds to each hill) spaced about 4 feet apart in each direction. Cover with more than 12 inch of soil. When the plants are 2 or 3 inches high, thin out to leave only 3 or 4 plants to not more than 12 inch of soil. each hill.

An abundance of moisture is always needed.

One ounce of seed should plant about 60 hills

SWEET

Time to Plant—Sweet Corn is a rather tender plant and therefore seed should not usually be planted until about May I and then only if the weather is settled and reasonably warm. Plantings may be made at intervals, from that time until about July I using early varieties for the later sowings.

Seed Sowing—In the home garden it is best to sow Corn in rows which should be spaced about 3 feet apart. The seed should be sown very thinly; covered to a depth of one inch and the resulting plants thinned to stand about one foot apart. In larger field plantings the usual practice is to plant in hills spaced at least 3 feet apart each way. Four or five plants are allowed to each hill.

1 pound of Corn should plant a 200 foot row

HERBS for Flavor and Fragrance

8123 Anise (Annual). A nice appearing plant with 123 Anise (Annual). A nice appearing plant with finely divided foliage somewhat resembling Fennel. The tiny yellowish white flowers borne in lacy umbels, appear about 3 months after seed is sown and the seeds are ready for harvesting about one month later. These seeds are used for flavoring many foods such as soups, salads or breads, and also produce an oil which is used in cough medicines.

Pkt. 15c. 3 pkts. 35c.

such as soups, salads or breads, and also produce an oil which is used in cough medicines.

Pkt. 15c., 3 pkts. 35c.

145 Sweet Basil (Treat as Annual). An easily grown and popular culinary herb; a branching plant which bears whorls of greenish white flowers well above the smooth green leaves. The leaves are delightfully Clove-scented and may be used either fresh or dried for seasoning soups, salads and cottage cheese; also in chopped meats and sausages. Basil has been in use for over 1000 years. Pkt. 15c., 3 pkts. 35c.

156 Borage (Annual). Pretty sky-blue flowers in clusters on branching plants with somewhat rough, hairy foliage. The young leaves, before the plants bloom, may be cooked like Spinach and the fresh foliage which has a Cucumber flavor adds a cooling touch to salads.

Pkt. 15c., 3 pkts. 35c.

167 Caraway (Hardy Biennial). Caraway is an attractive plant with feathery green leaves and umbels of yellowish white flowers. It is valuable because the foliage may be used in soups and salads; the roots boiled and eaten as a vegetable and the seeds are popular for flavoring.

Pkt. 15c., 3 pkts. 35c.

8189 Coriander (Annual). A slender branching plant which bears rose-tinted blooms which resemble "Queen Anne's Lace." Coriander is grown for its seeds which when ripe have a pleasant, pungent flavor and are used in flavoring cookies, cakes, poultry stuffings, sausages and confectionery. Sow where the plants are to grow; transplanting is difficult. Pkt. 15c., 3 pkts. 35c.
8191 Dill (Annual). Fine cut, feathery foliage and umbels of greenish yellow flowers. An aromatic oil from the seeds is used in soaps and perfumes; the foliage flavors meat gravy, cottage cheese or potato salad and the seeds are used in pickles. Dill dislikes transplanting; sow where the plants are to grow.
8224 Horehound (Perennial). An old-time sweet herb the name of which is only known to many from its use in cough medicines and hard candy. Horehound is an aromatic plant with wooly white foliage and bristly whorls of white flowers, in Summer. The dried leaves are the useful part.
Pkt. 25c., 3 pkts. 60c.
8246 Lavender (Perennial). While Lavender is a perennial, it is best to give the plants Winter protection. It is strongly aromatic and very ornamental being much used in borders and rock gardens. The flowers are lavender and the foliage gray. Grown also for its aromatic oil which is well known in perfumes.
Pkt. 25c., 3 pkts. 60c.

8257 Marjoram, Sweet (Treat as Annual). A perennial plant but best treated as an annual because it is not reliably hardy. Small but erect, bearing close heads of purplish blooms. The deliciously fragrant foliage is popular for scent bags and in powders, and the fresh leaves are much used in salads. Dried

they may be used for seasoning meats, poultry or cheeses.

8318 Sage (Hardy Perennial). A purple-flowered subshrub with woolly whitish foliage. The fresh leaves may be chopped and used for flavoring sausage, cotage cheese or pickles. Dried and powdered they are

tage cheese or pickles. Dried and powdered they are used for sprinkling on roasted meats, in poultry stuffings and with certain cooked vegetables. Pkt. 25c., 3 pkts. 60c.

8329 Savory, Summer (Annual). A fragrant little plant with slender leaves and pale lilac flowers. About flowering time the entire plant is cut and dried and the leaves are then used for flavoring salads, meats, stuffings and cooked vegetables. Pkt. 15c., 3 pkts. 35c.

8367 Thyme (Hardy Perennial). An erect little shrubby plant with small, grayish green leaves closely set on small, wiry stems, and lavender flowers. Used for ornamental purposes in borders or rock gardens. The fresh tops are often used for garnishing and the leaves either dried or fresh, are chopped and used for flavoring a wide variety of cooked foods.

Pkt. 25c., 3 pkts. 60c.

MUSKMELONS

Time to Sow — The seed should not be sown outdoors until the weather becomes warm in June but they can be started indoors about May 10 and planted in the garden in June.

Soil—Finely prepared loam is best for indoor starting.
The garden soil should be generously manured and preferably light.

Planting—Melons should be grown in hills spaced about 4 feet apart each way. Plant 5 to 10 seeds in each hill and cover with not over ½ inch of soil. When the plants are well started thin out so that the strongest 3 or 4 remain in each hill.

1 ounce of seed will plant 60 hills

PEPPERS

Time to Plant—For an early crop the seed may be sown either in the house or in a coldframe in early April. However, seed sown from May 15 to June 1 in the open ground will produce a crop in late Summer.

in late Summer.

Seed Sowing—Sow the seeds thinly in flats or in a coldframe in light pulverized soil. Cover them with not over ¼ inch of soil.

Soil Preparation—Any reasonably good, well cultivated garden soil, preferably ground that has been manured the previous year. Soil too rich in nitrogen will tend toward the production of foliage rather than fruit.

Transplanting—Seedlings started inside, should be transplanted as soon as they are large enough to handle, int boxes or individual pots and spaced far enough apart so that each will have ample space for development. These plants should be gradually hardened off by exposure to out-of-door conditions during favorable weather, before being permanently placed in the garden, about June 1. Set the plants 1½ feet apart in rows leaving about 3 feet between the rows.

1 ounce of seed should produce about 2000 plants

6425 Early Calwonder. 110 days. An early variety with the same square, heavy fruit as the California Wonder but better suited to northern climates. Thick fleshed, flavorful and very mild. The plants are short, erect and very prolific. Pkt. 15c., ½ oz. 50c., oz. 85c.

Certified Potatoes

Aroostook Potatoes, certified as seed stock by the Maine Department of Agriculture.

Potatoes should be planted during April or early May. They will thrive in almost any fertile, well-drained, somewhat acid soil. Do not use lime. The soil should be plowed or deeply dug over and furrows 6 inches deep and $2\frac{1}{2}$ to 3 feet apart, should be made. A commercial fertilizer with high phosphorus and potash content should be thoroughly mixed with the soil at the bottom of the furrow (about 20 lbs. per 100 ft. row) and about 2 inches of unfertilized topsoil should be placed over it.

Cut each Potato into three or more pieces with at least one good eye to the piece. Treat with Semesan-Bel and plant, about 10 inches apart, in the prepared furrows. Cover with 3 or 4 inches of soil. Cultivate constantly throughout the season. (10 bushels are sufficient to plant one acre)

Time to Sow—For an early crop seed should be sown just as soon as the ground can be worked (about April 1) with successive sowings up to the end of May. This crop runs quickly to seed in hot, dry weather and therefore it is best not to plant again until about August 15 when a Fall crop of Spinach can be sown which will provide greens until frost.

Soil Preparation—Spinach, to be succulent and tender must have a really rich soil, well prepared and liberally manured.

Planting—Sow the seed thinly in rows; cover with not over ½ inch of soil and allow 1½ feet between rows. When the plants are large enough to handle, thin out, leaving about one inch between plants.

1 ounce of seed should sow a 50-foot row

7049 King of Denmark. 48 days. Of Danish origin, and a selection from the best types of Long-standing varieties. Will remain in good condition for cutting for about two weeks after other varieties Pkt. 10c., oz. 25c., 1/4 lb. 70c., lb. \$2.00 have bolted to seed.

7061 Bloomsdale Long Standing Savoy. 45 days. Valuable for either Spring or Fall sowing and a variety that is to be recommended in every way. Quality of the best. The thick, glossy green leaves are intensely blistered and crinkled. Quick-growing. Slow Pkt. 10c., oz. 25c., ¼ lb. 70c., lb. \$2.00

7068 Nobel Giant Thick-leaved. 45 days. Makes the largest plant of any variety in cultivation with leaves slightly crumpled toward the center, and of an inviting, medium-green color. Pkt. 10c., oz. 25c., 1/4 lb. 70c., lb. \$2.00 flavor.

7072 Viking. 45 days. A new selection of Long-standing Spinach with rich dark green leaves. Does not readily go to seed.

7043 NEW ZEALAND SPINACH

A true cut-and-come-again vegetable, exceptionally valuable for Summer "greens." The plants are robust, of low spreading habit, extremely drought resistant and produce an abundance of small, thick, tender leaves. As this is not a true Spinach, the culture is somewhat different. The seeds may be sown from May 1 to July 1 and should be soaked in warm water a few hours before planting. Sow at a depth of $\frac{1}{2}$ inch and thin out to stand 2 feet apart. Pkt. 10c., $\frac{1}{2}$ oz. 30c., oz. 50c., $\frac{1}{4}$ lb. \$1.50

Squash

There are two distinct types, the Summer or bush type and Winter or vine type. Time to Plant—Sow the seeds of Summer Squash from May 1 to July 1 and Winter Squash from May 1 to June 1.

Soil Preparation—Prepare the hills by spading in two or three shovelfuls of well-rotted manure to each hill. If this is not available, work in about a handful of commercial fertilizer to each hill.

Planting—It is best to sow from 6 to 8 seeds in each hill about ½ inch deep. When these are well up, thin out, leaving only 2 or 3 of the strongest plants to grow in each hill. For Summer Squash allow about 4 feet each way between the hills and 7 feet each way for Winter varieties.

1 ounce Summer Squash will plant about 50 hills 1 ounce Winter Squash will plant about 15 hills

TOMATO

Time to Sow—It is best to sow indoors in flats, or in coldframes, during April, but seed sown outdoors in early May will produce fruit in September.

Planting—When sowing use a good light sifted loam and broadcast the seed thinly over the surface, cover with not more than ½ inch of soil. When the seedlings are from 2 to 3 inches high they should be given ample space for proper growth. Either transplant or thin out so that they will be about 3 inches apart. After all danger of frost is past these plants should be hardened off, by gradual exposure to the out-of-doors, during favorable weather; transplanting them to the garden about May 20th. Space the plants about 3 feet apart in the rows allowing 4 feet between rows. Closer planting is possible if the plants are to be staked.

One ounce of seed should produce about 1500 plants

TURNIPS and RUTA-BAGAS

Turnips are easy to grow. They will thrive in the Spring or Fall but will not do well during the heat of Summer. Seeds may be sown as early as the ground is workable (about April 1) with successive sowings until May 15. The Fall crop should be sown in August. Any reasonably good garden soil will suffice.

Sow in rows, 1½ feet apart and cover the seed with not over ½ inch of soil. When the plants are about 3 inches high, thin them out to stand 3 inches apart. These tender vitamin-rich plants should not be discarded, they make delicious greens.

1 ounce of seed should sow a 150-foot row

7314 Early Snowball. 42 days. Very fine firstearly variety, producing a small, globe-shaped root, free of all coarseness, and pure white. Recommended to the home gardener because of its superior quality.

7394 Yellow Aberdeen. 70-80 days. Very hardy and productive. Good for stock and table. Keeps well.

Pkt. 10c., oz. 15c., 1/4 lb. 45c.

7402 Golden Ball. 60-65 days. A small, early, medium-sized golden yellow variety with flesh of the finest texture. Unsurpassed for table use. Pkt. 10c., oz. 20c., ¼ lb. 60c.

RUTA-BAGAS

An important Fall crop for the roots can be stored throughout the Winter.

Seeds may be sown during April, but since they do not do well during hot weather, it is best not to make further plantings until after June 15, when an Autumn crop may be sown. Their cultural requirements are like Turnips except that they must be thinned to stand 6 inches apart.

I ounce of seed should sow a 150-foot row

6271 White Mountain Watermelon

7335 Purple-Top White Globe

TAMPALA

7079 Tampala. A delicious green vegetable which is cooked and served like Spinach. The entire plant may be used when it is 5 to 6 inches high or it may be allowed to develop and the individual leaves used. It should be sown outdoors from early May until Midsummer. Sow thinly in rows and cover the seed with not over ¼ inch of soil. If plants are to be used when small, thin out to 2 inches apart; or 12 inches apart if they are to develop fully. Pkt. 15c.

WATERMELONS

Time to Sow—Outdoors after the weather has become settled and warm (during June).

Soil-Light, well-drained soil that has been thoroughly manured.

Planting-Melons should be sown in hills spaced about 8 feet apart, each way. Sow 5 to 10 seeds in each hill and cover with not more than one inch of soil. When well started thin out so that 3 or 4 of the strongest plants remain in
